Upcoming In-Person Sessions | 7-25 Delegates per Session

Course Overview

This five-day professional development programme helps participants evaluate, finance and manage risk in upstream, downstream and integrated petroleum projects. It combines economic theory with real-world applications in investment appraisal, financial modelling, economic evaluation and risk management.

Course Objectives

- Understand the economics of petroleum projects.
- Apply financial tools to project appraisal and decision-making.
- Analyse and manage project risks.
- Evaluate how fiscal systems and market dynamics affect project economics.
- Make informed investment decisions in volatile markets.

Learning Outcomes

- Apply NPV, IRR and other investment criteria.
- Build and use petroleum project financial models.
- Conduct sensitivity and scenario analysis.
- Implement risk management strategies.
- Evaluate project viability under uncertainty.

Key Benefits

- Expert-led training with industry-relevant case studies.
- Practical exercises and financial modelling tools.
- Tools for managing project risks and uncertainties.
- Insights into global oil and gas market dynamics.
- Networking with peers across the industry.

Who Should Attend

International oil and gas professionals, including project managers and engineers, petroleum economists and financial analysts, business development and asset managers, and executives and senior managers.

Delivery Format
Both scheduled sessions are in person. Contact TDE about virtual delivery.
